## Fast. Easy. Comprehensive.

The BIOFIRE JI Panel tests for a comprehensive grouping of gram-positive and gram-negative bacteria, yeast, and antimicrobial resistance genes most often associated with joint infections.

0.2 mL  
synovial fluid

Approximately 2 minutes  
of hands-on time

Results in about  
an hour

Multiple results  
in one report

## Comprehensive Panel Menu

The BIOFIRE® JI Panel menu has 39 targets, encompassing several common causes of joint infections, as well as relevant antimicrobial resistance markers. The test targets difficult-to-grow anaerobes and fastidious pathogens.

## Potential to Improve Patient Management

Using PCR technology, the BIOFIRE JI Panel identifies bacteria, yeast, and antimicrobial resistance genes. Fast, accurate results on these targets may provide clinicians with the information they need to make crucial decisions, such as admission, therapy, and surgical intervention.
