

WHAT IS SEPSIS?

Sepsis arises when the body's response to an infection injures its own tissues and organs. It may lead to shock, multi-organ failure, and death – especially if not recognized early and treated promptly.

A GLOBAL HEALTH CRISIS

47 000 000 -
50 000 000
cases per year

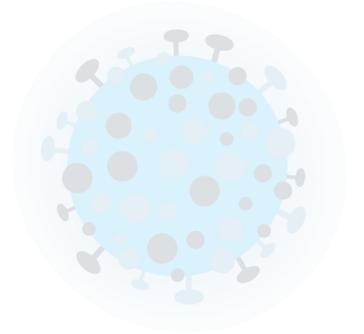

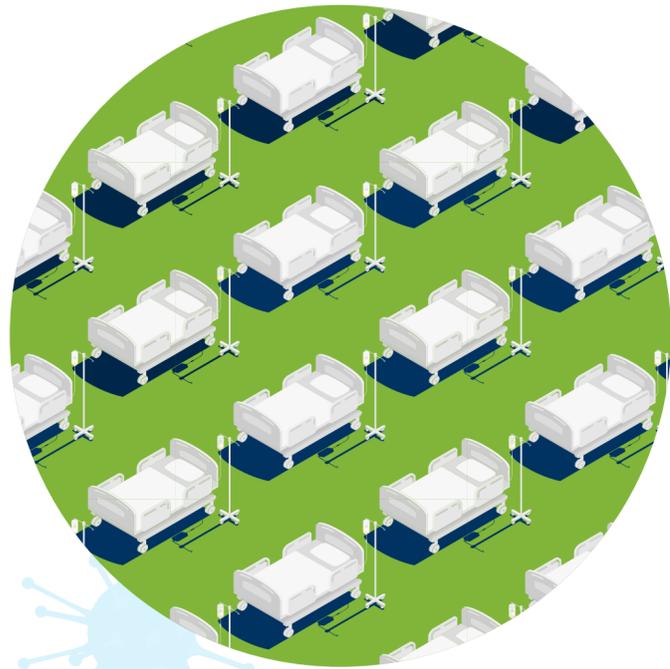

1 in every
5 deaths

worldwide is associated with sepsis

Survivors may face
lifelong consequences

At least 11 000 000
die – **1 death every**

2.8 seconds

COMMON SOURCES OF SEPSIS

Infection of Unknown Source and Viruses, such as SARS-CoV-2

Meningitis

Pneumonia

Skin or Soft Tissue Infection

Bloodstream Infection

Urinary Tract Infection

Abdominal Infections, e.g.

Catheter-Related Infection

- Appendicitis
- Infectious Diarrhea
- Gallbladder Infection

RISK GROUPS

**Everybody Can Get Sepsis –
Certain People Are at Even
Higher Risk**

Children Under 1

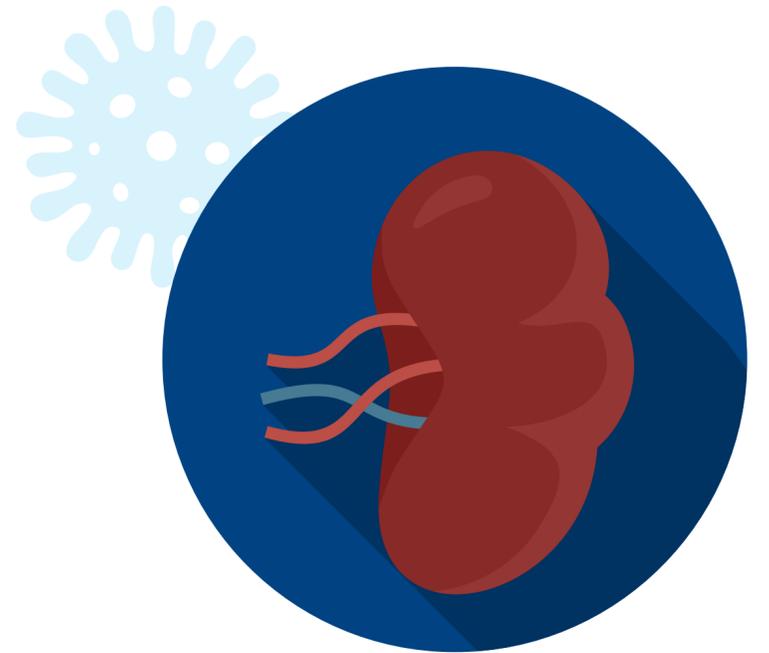

**People with Weakened
Immune Systems
e.g. AIDS, Diabetes**

**People With Chronic Diseases
e.g. Lung, Liver, Heart**

Adults Over 60

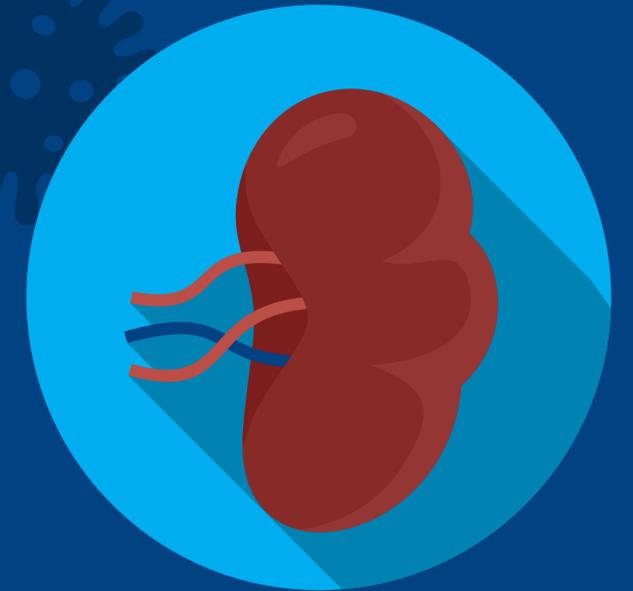

**People with
No Spleen**

PREVENTION SAVES LIVES

Prevent Infection – Prevent Sepsis – Save Lives

Vaccination

**Prevent HAIs
(Hospital-Acquired
Infections)**

Safe Childbirth

Clean Water

Hand Hygiene

POST-SEPSIS SYMPTOMS

Sepsis Does Not End at Hospital Discharge

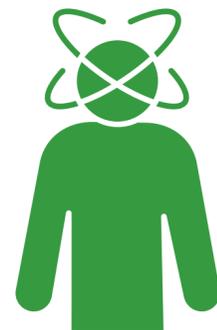

Difficulty Sleeping

Sadness

Clouded Thinking

Muscle Weakness

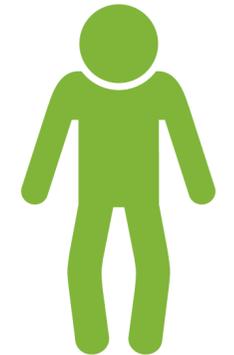

Poor Memory

Anxiety

Difficulty Swallowing

Fatigue

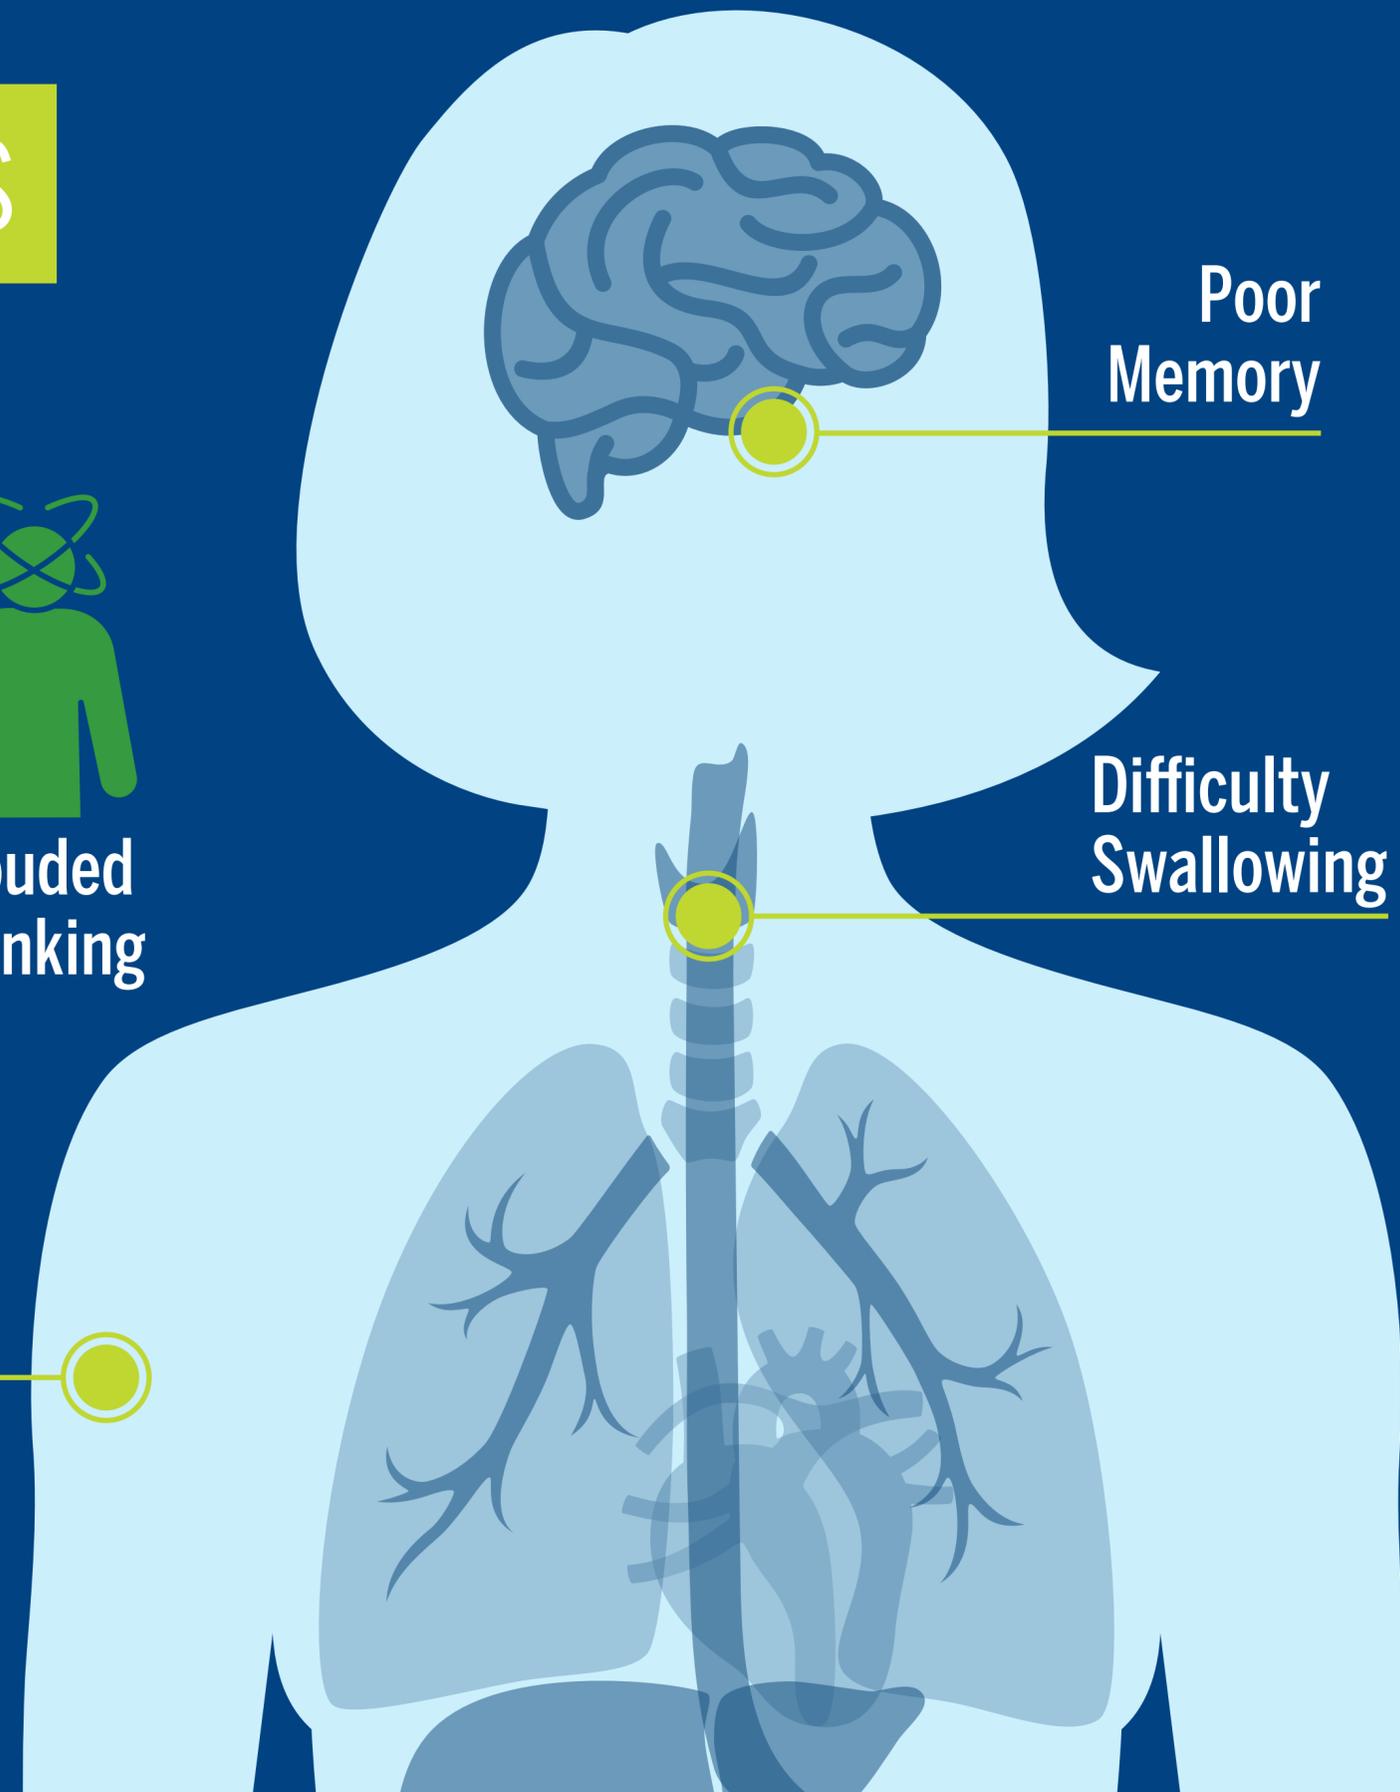

Difficulty Concentrating

SEPSIS 6

Quickly identifying these symptoms can **save lives.**

1 Disorientation

4 Fever, shivers

2 Shortness of breath

5 Extremely ill

3 Tachycardia

6 Pale skin

ACT FAST.
SAVE LIVES.
